2005 VERMONT MOOSE HARVEST REPORT

Most of the programs described in this report are funded through the *Federal Aid in Wildlife Restoration Program*. This program initiated in 1937 as the Federal Aid In Wildlife Act and created a system where by taxes are paid on firearms, ammunition and archery equipment by the public who hunts. Today this excise tax generates over a hundred million dollars each year that are dedicated to state wildlife restoration and management projects across the United States. The State of Vermont use these monies for acquiring land, and for restoring and managing wildlife. These excise tax dollars, coupled with state hunting license fees have been the predominate source of money funding the successful restoration and management of Vermont's wildlife resources.

2005 Moose Report

Six hundred-and-forty moose were harvested in Vermont's 2005 moose season. Steady rains fell throughout the opening weekend; consequently hunter success rates were running about 10% behind 2004. Weather conditions improved as the season progressed, and overall success rate ended up at 61%, down only 4% from the previous year. Approximately 96 tons (an estimated 192,000 lbs) of boneless moose venison was harvested.

For the first time in Vermont, moose permits were no longer issued free of charge. Residents and non-residents paid \$100 and \$350 for their permits, respectively.

Either-sex permits were issued to 766 permittees across 17 Wildlife Management Units (WMUs). In addition, 280 permits for antlerless moose were issued for WMUs D2, E1, E2, and O1 for a total of 1,046 permits issued. Five of these permits were won by bidders through a sealed-bid auction (3 by non-residents and 2 by Vermonters). Winning auction bids ranged from \$7,777 to \$2,510.

Harvest Dates & Success Rates

Vermont's 13th moose season began on the third Saturday in October (15th). A split-season format was used for the first time, with either-sex permit holders hunting the first season and antlerless-only permittees hunting the following week. The exception to this setup was that the antlerless permit holders for WMU O1 also hunted during the first season. One hundred twenty-nine moose were taken on opening day (Table 1). Either-sex permit holders recorded a 67% overall success rate (down only slightly from 69% in 2004). Forty-six percent of antlerless permit holders were successful, down from 55% the previous year when there was no split season. Success rates by WMU and Permit Type are given in Table 2.

A total of 13,091 valid applications were received for the 2005 Vermont moose season lottery (10,944 residents and 2,147 non-residents). The chances of drawing a permit were 1 in 12 for residents (939 permits allocated) and 1 in 21 for non-residents (101 permits allocated).

Biological Data

Three hundred thirty-four (52%) of moose taken were bulls, 249 (39%) were cows, and 57 (9%) were calves (31 males and 26 females). Completely-dressed carcass weights were obtained from 561 moose, or 88% of the total harvest. Forty-two bulls weighed over 800 lbs, including the largest which was a 5-year old taken in Kirby that weighed 925 lbs. The average completely-dressed weight of 27 male calves, 71 yearling bulls and 228 older bulls was 254, 440 and 623 lbs, respectively. The average beam diameter of 78 yearlings was 34.5 mm.

The heaviest cow was a 6-year old weighing 734 lbs and taken in Granby. The average weight of 22 calves, 49 yearling cows and 213 older cows was 233, 411 and 532 lbs, respectively. Complete sets of paired ovaries collected from 101 cows were sectioned and examined for evidence of ovulation. The ovulation rate was 0.00 ova/cow for 17 yearlings, 1.05 for 21 two-year-olds, and 1.00 for 63 cows > 3 years old.

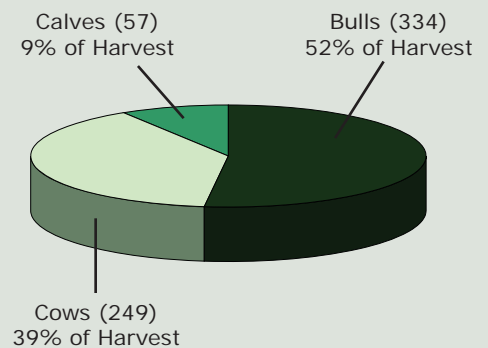

A central incisor was also collected from 574 adult moose, then cleaned and shipped to Montana for aging by the counting of cementum annuli. The average age of the 328 bulls and 246 cows was 3.83 and 4.15 years, respectively. Twenty-four percent of these moose were yearlings, and 45% were > 4 years of age. The oldest bull and cow were 13 and 15 years, respectively. Cementum ages and other physical measurements for all harvested moose are given in Tables 3 and 4 at the end of this report.

Scouting

Moose hunter surveys were returned by 715 of the 1,046 permittees, 668 (93%) of whom reported that they scouted prior to the hunting season.

640 MOOSE HARVESTED

AGE AND SEX DISTRIBUTION OF HARVEST

Jeff Wright

Average time spent scouting was 26.6 hours/party, and the average number of moose seen per hour scouted was 0.124, or approximately 1 moose seen for every 8 hours of scouting effort. A comparison of scouting data between WMUs is presented in the table below.

Successful Hunters

Sixty percent of resident hunters were successful, while 71% of non-residents filled their tags. Non-resident hunters who bagged a VT moose hailed from 21 states or provinces as follows: NY (16), MA and NH (9 each), ME (6), CT, MI, VA and PA (4 each), NJ and IN (2 each), and 1 each from MN, OH, CA, LA, KY, IL, DE, RI, CO, MD and Quebec. Subpermittees took 117 (18%) of the moose killed. Most moose (624) were taken with rifles, 10 with muzzleloaders, 4 with handguns, and 1 each with a shotgun and bow.

Unsuccessful Hunters

Overall, 406 hunters were unsuccessful. Of the 208 (51%) who returned a survey, only 85 (41%) hunted all 6 days. Forty-one hunted for 5 days, 39 for 4, 27 for 3, 10 for 2, 1 for 1, and 5 for 0 days. One hundred and twenty-eight of the unsuccessful hunters saw a total of 366 moose, and 77 (or 34% of all unsuccessful hunters who hunted at least 1 day) passed up moose that they believed they could have taken (93 bulls, 65 cows, and 32 calves). The 93 bulls include 74 which were encountered but off limits to 29 antlerless-only permit holders.

Moose were taken in 104 different towns. The towns with the highest harvests were Granby and Norton (46 each), East Haven (44), Averill (37), Ferdinand (30), Bloomfield (26), Brighton (22) and Lewis (20).

This map shows the geographic distribution of the moose harvest by Wildlife Management Unit.
