

## Rare and Uncommon Native Vascular Plants of Vermont

Vermont Natural Heritage Inventory

Vermont Fish & Wildlife Department

10 June 2024

The **Vermont Rare and Uncommon Native Vascular Plants List** is produced by Vermont Fish & Wildlife Department's Natural Heritage Inventory with assistance from the VT Endangered Species Committee's Scientific Advisory Group on Flora. The Vermont Natural Heritage Inventory is the state's official repository for records of rare, threatened, and endangered species. Information in the Natural Heritage Database is the result of work of enthusiasts and botanists, both unpaid and professional.

This list is to inform naturalists, biologists, planners, developers and the general public about our rare and uncommon native flora. These species may be rare because they have very particular habitat requirements, are subject to habitat loss, are at the edge of their range, are vulnerable to disturbance or collection, or have difficulty reproducing for unknown reasons.

The Vermont Natural Heritage Inventory values the diversity of our ecological heritage and all the ways it is interwoven with our cultural heritage. We recognize these lands and waters were long stewarded by Abenaki peoples, and we honor the significant, yet often ignored or dismissed, contributions that Indigenous botanists, ecologists, and cultures have made and continue to make toward understanding our local flora. Western Abenaki names for many of these plants continue to be in use in addition to English and scientific names.

**Some taxa on this list are rare varieties of otherwise common or exotic species; these are noted. Unless noted, varieties/subspecies on this list can be assumed to be the only varieties/subspecies of the species in Vermont.**

Species with a state status of Threatened or Endangered (T or E) are protected by **Vermont's Endangered Species Law (10 V.S.A. Chap. 123)**. Those with a federal status of Threatened or Endangered (T or E) are protected by the **Federal Endangered Species Act (P.L. 93-205)**.

State and global ranks represent the rarity and extirpation/extinction risk of the taxa. A brief Explanation of Legal Status and Information Ranks follows this list and can also be found on the Department website. Members of the Scientific Advisory Group for Flora review and change the state ranks periodically. Global ranks are developed and reviewed by NatureServe (<http://www.natureserve.org>) and its international network of natural heritage programs and conservation data centers.

Flora Conservanda (FC) status is a designation of a taxon's rarity throughout New England. It is a collaborative effort among New England's State Natural Heritage Programs and coordinated by the Native Plant Trust (formerly New England Wild Flower Society). Flora Conservanda statuses were last updated in 2012.

The Rare and Uncommon Native Vascular Plants List follows the taxonomy and nomenclature included in the following:

Gilman, Arthur V. (2015) New Flora of Vermont

Gilman, Arthur V. (2019) County Checklist of the Vascular Flora of Vermont

Haines, Arthur (2011) Flora Novae Angliae

Haines, Arthur (2019) Flora Checklist (<http://www.arthurhaines.com/tracheophyte-checklist>)

If you locate a rare or uncommon species, we would appreciate receiving information on it. A Rare Plant Reporting Form is found at the end of this list or on the Department's website (<https://vtfishandwildlife.com/node/215#rare-species-form>). Please obtain landowner permission before accessing private property.

44 Heterophylous records treated as *V. palmata* L. in Haines 2011 and Gilman 2015 publications are now treated as *Viola palmata* var. *triloba* (=*V. triloba*) again. *Viola subsinuata* is the currently accepted name for the homophylous *V. palmata* of authors other than L.

45 *Viola sagittata* in the narrow sense, excluding *Viola sagittata* var. *ovata*--which is now treated as *Viola fimbriatula*.

## **Explanation of Legal Status and Information Ranks**

**State Rank and Global Rank** - Value that best characterizes the relative rarity (abundance) or endangerment of a native taxon within Vermont's geographic boundary or throughout its range, respectively. Ranks are as follows:

- 1 - Very rare (Critically imperiled): At very high risk of extinction or extirpation due to extreme rarity (often 5 or fewer populations or occurrences), very steep declines, or other factors
- 2 - Rare (Imperiled): At high risk of extinction or extirpation due to very restricted range, very few populations (often 20 or fewer), steep declines, or other factors
- 3 - Uncommon (Vulnerable): Moderate risk of extinction/extirpation due to restricted range, relatively few populations or occurrences (often 80 or fewer), recent and widespread declines, or other factors
- 4 - General, regular, and apparently secure: May be locally uncommon or widely scattered but not uncommon on a statewide basis
- 5 - Common (Secure): widespread and abundant
- H - Possibly extinct/extirpated: Missing; only historical occurrences but potential for rediscovery
- X - Presumed extinct/extirpated: Not located despite intensive searches and little likelihood of rediscovery
- U - Unrankable: Currently unrankable due to lack of information or substantially conflicting information about status or trends
- NR - Not ranked: Not yet assessed
- NA - Not applicable. Element is not a suitable target for conservation for one of the following reasons: Hybrid, Exotic Origin, Accidental/Nonregular, Not Confidently Present, No Definable Occurrences

Uncertainty may be indicated, either in the form of a range rank (e.g. S1S3) or a ? qualifier following a numeric rank. For global ranks only, a T-rank indicates an infraspecies, and a Q qualifier following the rank indicates uncertain taxonomy.

**State Status** - Legal protection under Vermont Endangered Species Law (10 V.S.A. Chap. 123)

E = Endangered: in immediate danger of becoming extirpated in the state

T = Threatened: with high possibility of becoming endangered in the near future

PDL = Proposed (by Agency of Natural Resources Secretary) for Delisting

PE = Proposed (by Agency of Natural Resources Secretary) for Endangered Status

PT = Proposed (by Agency of Natural Resources Secretary) for Threatened Status

RDL = Recommended (by the Endangered Species Committee) for Delisting

RE = Recommended (by the Endangered Species Committee) for Endangered Status

RT = Recommended (by the Endangered Species Committee) for Threatened Status

**Federal Status** - Legal protection under the federal Endangered Species Act, U.S. Fish & Wildlife Service

E = Endangered

T = Threatened

PDL = Proposed for Delisting

C = Candidate for Listing (not legally protected under ESA)

SC = Species of Concern (not legally protected under ESA)

**FC Status** - Flora Conservanda status (2012), New England Plant Conservation Program. Not a legal designation.

See <https://www.nativeplanttrust.org/conservation/rare-and-endangered/> for more information.

Div. 1 - Globally and Regionally Rare Taxa in New England

Div. 2 - Regionally Rare Taxa in New England - typically fewer than 20 populations.

Div. 2a - Regionally Rare Taxa in New England - slightly more than 20 occurrences, but is vulnerable to extirpation

Div. 3a - Declining in a substantial portion of their range in New England

Div. 3b - Disjunct and rare in a portion of New England.

Div. 4 - Historic or extirpated species in New England

Div. IND - Indeterminate Taxa - under review for inclusion, but taxonomy, nomenclature, or status in the wild is not clearly understood.
